CASAWORKS SHOWS DIVERSITY WITH NEW PRODUCTS FOR 2005

(CasaWorks, Albuquerque, New Mexico)— CasaWorks, Inc., an innovator of home automation solutions, will be demonstrating their Cielo™ Home Management System, their new miCasa™ Z-PC USB to Z-Wave™ transceiver and Cielo™ HMS-P01 Structured Wiring Panel Controller at the 2005 International CES, Las Vegas Convention Center, Jan 6-9, 2005. Come and view our demonstrations at the TechHome Zone, Booth 26618.

“It has been a busy year for us and we are excited about the breadth of our products. We have a lot to offer both the consumer and installer. Our booth will feature three areas of interest this year; home theater, Z-Wave communicating devices and control panels for the home builder market,” says Michael Arendall, President and CEO of CasaWorks. “We are working to make all new supported consumer electronics devices truly interactive and ‘plug and play’ while making home theater and digital media entertainment fun to use.”

For the consumer market CasaWorks has developed products to move closer toward true integration of home control devices by supporting UPnP (Universal Plug-n-Play) technology. CasaWorks™ will be showing their new miCasa™ Z-PC USB to Z-Wave™ transceiver connected to a Home PC integrating Z-Wave enabled products including lighting, motorized window coverings and thermostats.

For the homebuilder market we are introducing the Cielo™ HMS-P01 Structured Wiring Panel Controller for the both Honeywell/FutureSmart and GE Security Smart ConnectionCenter structured wiring panels. The key to integrating all the systems installed in your home is the Cielo™ HMS-P01 Panel Controller. Although you will not see this small device installed in the structured wiring enclosure it is the brain of your Cielo™ Home Management System giving you one touch access to all the systems in your home from a PDA, Touch Panel, or PC via a web browser interface.

Cielo™ provides control of several popular security panels including Honeywell and GE Security. Users can arm or disarm from any supported user interface. In addition, when connected to the Cielo™ Panel Controller the system can monitor user’s access and send an e-mail notification, perfect for letting you know when the children get home from school. Security can be controlled from a simple integrated user interface or monitored with a computer connected to the Internet via a web browser. Cielo™ provides control of several communicating thermostats as well.

What makes the Cielo Home Management System different from other custom control systems is that offers out-of-the-box behaviors and user interfaces that can be easily customized by a Cielo dealer, requiring no programming. This significantly reduces the cost of the complete system allowing the homeowner to save money or upgrade to components that add more features. Look for more components to be available for Cielo in the near future and for additional manufacturers of home electronic equipment.

About CasaWorks, Inc.

CasaWorks is an embedded hardware and software innovator and is developing technologies necessary to implement automation in mainstream homes. Using state-of-the-art software technology and tools, the company is creating innovative products that are easy to install and economical to own. With more than 15 years of experience working with software and hardware automation systems in commercial applications, CasaWorks is now focused on the growing residential market. For more information, see the CasaWorks Web site at <http://www.casaworks.com>.
